## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

2. The prior art documents submitted by the applicant in the Information Disclosure Statement filed on March 13, 2007 have all been considered and made of record (note the attached copy of form PTO-1449).

### ***Allowable Subject Matter***

3. Claims 11-25 are allowed.
4. The following is an examiner's statement of reasons for allowance: The prior art cited is the most relevant prior art known. However, the invention of claims 11 and 23 distinguishes over the prior art for the following reasons. The prior art of record discloses devices for producing a hollow profile having at least one branch, comprising a multipart mold configured for internal high pressure forming of the hollow profile, and a tool (e.g. a punch) arranged to open an end of the at least one hollow profile branch. However, the prior art of record does not disclose or reasonably suggest, either alone or in combination, the device comprising a tool, wherein the tool is a cutting device having a parting slide displaceable essentially transversely to a longitudinal axis of said branch to open said branch. The present invention thus permits increased uniformity and reproducibility, and thus quality, of a hollow profile branch structure over the prior art. Therefore, claims 11-22 are allowable over the prior art of record. The method of claims 23-25 is allowable for similar reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,662,447 (U.S. Patent Application Publication 2001/0037573) and U.S. Patent 6,434,989.
